

Protect yourself  
when you're online!

# Online Security Tips

## Protect your location.

Avoid "Checking In" to places until after you have left. Stalkers, scammers, and unwanted followers love this tool.

Also, keep your address off social media. Friends and family don't need Facebook to keep track of you.

## Don't click it!

When visiting unfamiliar websites, clicking buttons, links, attachments, pop-ups, or otherwise puts you at significant risk of downloading viruses, spyware, and much worse.

## Think before you share.

Any picture, text, or personal information that touches the internet becomes permanent public information. Yes, this can often include Snapchat.

## Never rely on anti-virus.

You should absolutely have anti-virus running on your machines; however, this only protects you from a limited number of attacks.
